A Flat-context scaling (conceptual)
dense fine history
$B_{ctx} = 64H$
attention work
$O(L^2)$
coarse + recent fine
$B_{ctx} = 16H_c + 64w_f$
same nominal reach
with fewer context tokens
No hardware ceiling or crossover is fitted in this schematic.
B Re-entry geometry (conceptual)
observed
leaves view
re-enters
short dense window: earlier view absent
long coarse stream: earlier view addressable
Addressable history is not a guarantee of successful retrieval.
